

Opener

Draft Lesson. Still working on it.

A LETTER FROM LUKE AND NATE

Congratulations. You made it to the end of **Be Smarter Than the Tool**. We hope you enjoyed our course. Some subjects were tough, but we hope you still had some fun.

Here's something that might surprise you. Your AI knowledge is now higher than most adults who use AI today. And whenever anyone talks about AI, you'll see whether the speaker knows their stuff.

And here's our prediction. Ten years from now you'll think back to this course and return to BeSmarterThanTheTool.com. After shaking the cobwebs off the first page, you'll re-read some of what you learned here. And you'll chuckle to yourself, because your future AI knowledge will make this course feel like the training wheels on your first bike.

That's what we want for every person our age. Get the fundamentals here, and soar to new heights in the AI future.

Before you go, the next lesson has a 25-question final exam. Pass it, and you'll get a cool certificate in PDF. Hang it on the wall.

If we inspired you to keep learning, there's a page called **Resources** which lists a few next steps.

And lastly, let us know how you liked the course. There's a **Reviews** page where you can read previous reviews and add your own.

And, if you're a hockey fan, GO STARS!

Luke and Nate

Here are the five biggest takeaways from the course. Everything you just learned ties back to these ideas. Lock them in and you've got the mental model that runs every AI conversation.

FIVE BIG IDEAS TO TAKE WITH YOU

AI predicts. It doesn't think.

Fluent isn't the same as true.

The more you know, the more it gives.

You make the call.

The better AI gets, the more you matter.

now you're smarter than the tool.
