

Opener

WHAT MAKES AI USE GOOD?

Don't just ask.

— *Aim.*

Don't just copy.

— *Check.*

Don't just use AI.

— *Work with it.*

It doesn't replace your thinking. It multiplies it.

You've met the tool and seen what it can do. Now it gets practical: how do you actually work with it?

Here's what most people miss: the AI is identical for everyone, but the results aren't. Think of a camera. The same phone that takes one person's blurry lunch photo takes a photographer's cover shot, and the tool never changed. AI is exactly like that: what you get out of it comes down to how you use it.

IN THIS SECTION

Work With AI

KNOW WHAT IT'S FOR

- 1 First, why AI works differently from ordinary software, the work it does best, and how to pick your app and learn it well.

USE IT WELL

- 2 Then, the moves that get a better answer, and a look at what the model actually reads when you ask.

THINK BEFORE YOU TRUST

- 3 Finally, what to do with the answer that comes back: question it, verify it, and decide whether it's good enough to use.

Don't just use AI. Work with it.

It doesn't replace your thinking. It multiplies it.
