Evaluation Matters

Is it right? Is it good enough for what I need?

01 DO A QUICK REVIEW

Read. Read the answer before you use it. If you pass it along, you are responsible for what it says.
Understand. You cannot judge an answer you do not understand. Ask for a simpler explanation of anything unclear.
Validate. Compare the answer with what you know and what you asked for. Is anything wrong, missing, or not useful?

02 TAKE A CLOSER LOOK

A quick review is often enough. When more is riding on the answer, or you are not sure it is right, take a closer look.

What kind of task? A factual answer needs accurate information. A draft needs clear writing. A plan needs to work.
How much is riding on it? What happens if the answer is wrong? The more that depends on it, the more carefully you should check it.

Check the sources. Ask for sources, then open them. Are they reliable, and do they support the claims? For current information, ask AI to search the web.
Challenge the answer. Ask for the strongest argument against it or what important information was left out. Decide whether that changes your view.
Check it yourself. Recalculate the numbers, test the code, or ask someone who knows the subject.

03 MAKE YOUR MOVE

Use it. The answer is right and good enough for what you need.
Fix it. Tell AI what needs to change, or change it yourself. Check the revised answer before using it.
Walk away. If AI is not helping, try another approach or ask someone who knows the subject.

The tool answers. You evaluate.
