

Where AI Works Best

Match the job to one of these four strengths.

01 RESHAPE YOUR MATERIAL

Give AI something you already have and ask for it in a different form. Keep the meaning while changing the presentation.

Try: Turn notes into a table, a voice memo into a to-do list, or technical instructions into plain language.

02 EXPLORE POSSIBILITIES

Ask for options when you are stuck or want more choices. React to the ideas and ask for more of what interests you.

Try: Brainstorm essay angles, club names, story openings, or fundraiser ideas.

03 FIND WHAT MATTERS

Give AI a document or several sources and say what you need to know. Use the result to decide where to focus.

Try: Find scholarship requirements, summarize a chapter, or compare two articles.

04 WORK THROUGH PROBLEMS

Describe your goal, what you know, and what is getting in the way. Ask AI to break the problem into steps or compare approaches.

Try: Plan a trip within a budget, troubleshoot code, or investigate an unexpected experiment result.

KEEP YOUR JUDGMENT IN THE PROCESS

Check that rewrites preserve your meaning, summaries match the sources, and proposed ideas or solutions fit your situation. A fluent result is not a guarantee.

AI gives you a starting point. You make the call.
