

Opener

WHAT MAKES YOU VALUABLE?

Your setup.

Your questions.

Your judgment.

Your Skills.

— *And you'll always be Smarter Than the Tool.*

Last section, and it's the one you keep.

Think about learning to ride a bike. You outgrew it and moved on to another bike. But you had learned a key skill: balance. Whether you became a serious cyclist or just ride for fun, that skill stayed with you. Nobody could give you balance. You had to build it.

This section is about skills like that: the ones you build once and keep forever. Some of them are AI skills. The most important ones aren't. You'll build both here.

IN THIS SECTION

Build Your Skills

THE LAST OF THE AI

- 1 First, the last of the tool itself: which model to pick, how hard to make it think, what to type, and two habits for the road.

SKILLS AI WON'T REPLACE

- 2 Then, what stays valuable when everyone has the same tool: the person in the room, the angle nobody else brought, and the judgment that decides what's worth doing.

STAY SHARP

- 3 Then, staying current as the tools keep changing, and picking the one thing you get genuinely good at.

THE COMMON MISTAKE

Treating the end of the course as the end of the work. The hard machinery is behind you and the last page is in sight, so it's tempting to coast from here, pass the final, and call it done. But the tool you're using right now will be replaced, probably sooner than you'd guess. What this section asks you to build won't be.

KEEP THIS QUESTION IN MIND

Everyone will have the same tool. What do I bring that it doesn't?

The tool is rented.

The skills are yours to keep.
