

Opener

WHAT MAKES AI USE GOOD?

Don't just ask.

— *Aim.*

Don't just copy.

— *Check.*

Don't just use AI.

— *Work with it.*

It doesn't replace your thinking. It multiplies it.

You've met the tool and seen what it can do. Now the question gets practical: how do you actually work with it?

It starts with why AI is different from ordinary software. It learns from patterns instead of following written rules, and that one fact decides what it's brilliant at and where it falls apart, which is how you know what to aim it at.

From there, good AI use is a skill, not a reflex, in three moves: know what to use it for, ask for what you need in a way that gets it, then check what comes back.

IN THIS SECTION

Work With AI

KNOW WHAT IT'S FOR

1

First, why AI works differently from ordinary software, what that makes it good at, and which of the big apps fits which job, so you aim the right tool at the right work.

USE IT WELL

2

Then, the moves that get a better answer, and a look at what the model actually reads when you ask.

CHECK WHAT YOU GET

3

Finally, how to tell whether the answer is any good before you trust it.
