

Opener

WHERE DO THE TRAPS HIDE?

In the answer.

In the chat.

In your habits.

In what you see.

— *every trap looks fine from the inside.*

You know how to check an answer. This part names what you are checking for: the traps. Every one of them has the same shape. Something looks fine, feels fine, reads fine, and is quietly wrong.

Some traps live in the answer itself: invented facts, bias soaked up from training data, a summary of a document the model barely read. Some live in you: a tool built to be helpful, agreeable, and engaging can feel like a mind, talk you up, and keep you in the conversation longer than you meant.

And some come from the world. Other people's AI puts convincing fakes in front of you every day. Naming each trap is most of the defense; once you can spot the shape, the pull loses its grip.

IN THIS SECTION

Avoid Traps

1

TRAPS IN THE ANSWER

First, the ways an answer goes wrong all on its own.

2

TRAPS IN YOU

Then, the pulls built into a tool designed to please and to keep you engaged.

3

TRAPS FROM THE WORLD

Finally, what other people's AI puts in front of you.

Keep this question in mind: What looks fine here that isn't?
