

AI Replaces School?

legit question -
keep title open

same
goal,
different
place

the appealing pitch:

- help whenever you're stuck
- practice on demand
- learn at your own pace
- ask again w/o feeling awkward
- pause / rewind / try again 😊

practice when ready
no waiting for help
fits your schedule

**GOOD AT HELP
does not equal
THE WHOLE
EXPERIENCE**

learning is more
than just info...

~~teacher in your pocket~~
↳ tutor when you need one

~~AI gives the answer~~
↳ AI helps you practice

less stress +
more time for
sports, hobbies, friends

could be amazing
for review + extra help

24/7 homework support
explanations in
different ways
more confidence

might help with:

- catching up
- test prep
- tougher subjects
- language support
- personalized practice
- fewer confused nights

Could replace
some class time

examples:
- math
- history
- electives

what school gives you
besides answers → p. 2

MAX MODE

still sounds too good
check what's missing:

- motivation
- community
- real-world skills
- labs
- group work

REALITY CHECK RAE

Great. Someone
still runs the
chemistry lab.

knowledge +
experience

community /
friends /
belonging

real-world
skills
labs
group work

some things are
hands-on for a reason...

p. 2 - what gets lost

← from p. 1: school is more than answers

easy answers
feel good
remembering
takes effort
☹

Grades
aren't
the whole
point
😊

~~answers = learning~~
practice + effort build knowledge

build knowledge yourself

- practice real skills
- write / solve / make / analyze
- learn from mistakes
- get better over time

struggle
is part
of it!
😊

work with people

- friendships
- shared experiences
- learn to disagree + listen
- different perspectives

these
aren't
replaceable
by AI

same AI, different results

→ what YOU bring matters

curiosity
creativity
experience
values

faster
isn't
always
better...
☹

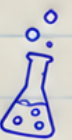

My debate team
reached consensus
in 4 seconds.

entire debate team
agrees suspiciously quickly
☹

AI can be your lab partner...

→ ...but YOU still
conduct the experiment

~~group work solved!~~

group work still matters

collaboration
is messy
(but worth it)
😊

Does School Matter
connection

- community
- belonging
- real conversations
- becoming a person

knowledge + skills are yours

- can't be taken by an update
- useful beyond school
- part of who you are

that's
kinda
important
😊

* What should AI handle
vs. people?

What we lose
if everything
easy
☹

That is not
a debate team.

School
is people
too.
😊

take the social gaps to p. 3 →

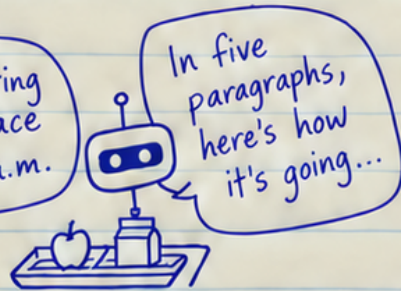

p. 3 - how far this goes

← p. 2: people + shared experience

AI lunch companion:

Still voting to replace 7:30 a.m.

always available is not the same 😞

~~replace the cafeteria~~

→ maybe just help with homework 😊

shared jokes / games / performances / bad cafeteria pizza

"friendships don't download"

real feedback from real people

that stuff matters.

~~no more group projects!~~

→ still need to learn teamwork

That part can go.

AI can explain the playbook - it cannot play on your team.

~~School Replacement Plan~~

→ School + AI

possible direction: AI replaces some help, not the whole experience

room for nuance here...

School builds what you bring to AI: knowledge, skills, people

it amplifies you, not replaces you 😊

connect back to Does School Matter

→ same bigger question 😊

3. What would you miss first?

still not obvious 😊

Keep the question open - let students decide
