

Opener

Draft Lesson. Still working on it.

THE COURSE IN FOUR IDEAS

AI predicts. It doesn't think.

What you bring shapes what comes back.

Fluent isn't the same as true.

You make the call.

now you're smarter than the tool.

Everything you just learned ties back to those four ideas. Lock them in and you've got the mental model that runs every AI conversation. The Final is waiting in the next lesson.

QUESTIONS YOU CAN ANSWER NOW

The same six questions. Different answers.

You saw these questions at the beginning of the course. Now that you're smarter than the tool, you can answer every one.

- 1 Do you know why AI writes a sentence one word at a time, like a person would?
- 2 Do you know how ChatGPT, Claude, and Gemini seem to know something about everything?
- 3 Do you know why every AI tells you it makes mistakes and to double-check its answer?
- 4 Do you know which skills keep you ahead of the tool instead of behind it?
- 5 Do you know why AI gives different answers to the same question?
- 6 Do you know why even the people who built AI can't explain how it got its answer?

You know more about AI than *most people who use it.*

You can explain what tokens are, how embeddings capture meaning, and why attention matters. Most people who use ChatGPT daily can't. That understanding is what separates someone who uses AI from someone who uses AI *well*.

THE COMMON MISTAKE

Treating the end of the course as the end of the work. The hard machinery is behind you and the last page is in sight, so it's tempting to coast from here, pass the final, and call it done. But the tool you're using right now will be replaced, probably sooner than you'd guess. What this course asked you to build won't be.
