

Evaluation Matters

Is it right? Is it good enough for what I need?

01 THE QUICK PASS

Read: Review the whole answer before using it.

Understand: Ask for a simpler explanation of anything unclear.

Validate: Compare it with what you know and what you asked for. What is wrong, missing, or not useful?

02 DO YOU NEED TO DIG DEEPER?

Can you judge it? If you lack the knowledge, keep checking.

What kind of task is it? Check the facts, writing, or plan against what the task needs.

How much is riding on it? Give high-stakes answers more care.

03 DIG DEEPER

Open the sources. Check reliability and whether they support the claims.

Challenge it. Ask for the strongest argument against the answer.

Look for gaps. Ask what important information is missing.

Check what is current. Ask AI to search the web, then open its sources.

Check independently. Recalculate, test, or ask someone who knows.

04 MAKE YOUR MOVE

Use it if it is right and good enough. **Fix it** and check again if it falls short. **Walk away** and try another approach if AI is not helping.

✓ The tool answers. You evaluate.
